Gregor Mendel was born in the district of Moravia, then part of the Austro-Hungarian Empire. At the end of high school, he entered the Augustinian monastery of St. Thomas in the city of Brunn, now Brno of the Czech Republic. His monastery was dedicated to teaching science and to scientific research, so Mendel was sent to a university in Vienna to obtain his teaching credentials.

10.3 Human Organ Systems. An organ system is a group of organs that work together to perform major functions or meet physiological needs of the body. Figure 18.8 below shows the eleven distinct organ systems in the human body. Assigning organs to organ systems can be imprecise since organs that "belong" to one system can also have functions integral to another system.

The history of genetics dates from the classical era with contributions by Pythagoras, Hippocrates, Aristotle, Epicurus, and others. Modern genetics began with the work of the Augustinian friar Gregor Johann Mendel. His work on pea plants, published in 1866, established the theory of Mendelian inheritance.. The year 1900 marked the "rediscovery of Mendel" by Hugo de Vries, Carl Correns and ...

The first stage of cellular respiration is glycolysis, which happens in the cytosol of the cytoplasm. Splitting Glucose. The word glycolysis literally means "glucose splitting," which is exactly what happens in this stage. Enzymes split a molecule of glucose into two molecules of pyruvate (also known as pyruvic acid). This occurs in several steps, as summarized in the following diagram.
