In this week, JKMS publishes one original article, two editorial responses, and one opinion about the Walk-Through screening system for COVID-19, which has recently become a hot issue. The Walk-Through system is another screening format for COVID-19 derived from the Drive-Through system. It has advantages in terms of the efficiency of the examination process and the safety of the examining ...

Cerebral malaria may be the most common non-traumatic encephalopathy in the world. The pathogenesis is heterogenous and the neurological complications are often part of a multisystem dysfunction. The clinical presentation and pathophysiology differs between adults and children. Recent studies have elucidated the molecular mechanisms of pathogenesis and raised possible interventions.

During our yeast two-hybrid screening of partners that may interact with viral silencing suppressor (VSR) V2, we identified CaM3, a Ca²⁺-binding protein in *Nicotiana benthamiana* (see below). There is a very high amino acid sequence identity among CaMs (Figure S1A). To investigate whether CaMs participate in RNAi, we performed CaMs-knockdown (KD) using Tobacco rattle virus (TRV)-induced gene ...

Studies on the inhibition of inflammation by infection with helminth parasites have, until recently, overlooked a key determinant of health: the gut microbiota. Infection with helminths evokes changes in the composition of their host's microbiota: one outcome of which is an altered metabolome (e.g., levels of short-chain fatty acids (SCFAs)) in the gut lumen.

Cooperation between host immunity and the gut bacteria is ...

The Millennium Development Goals (MDGs) made a marked transformation for neglected and vulnerable communities in the developing countries from the start, but infectious diseases of poverty (IDoPs) continue to inflict a disproportionate global public health burden with associated consequences, thereby contributing to the vicious cycle of poverty and inequity. However, the
