Creating Fakes Natural fakes. The common way to create a fake object is by using the A.Fake syntax, for example: `var foo = A.Fake<IFoo>();` This will return a faked object that is an actual instance of the type specified (IFoo in this case). You can create a fake delegate with the same syntax:

Creating Fakes - FakeItEasy

When you nest patch decorators the mocks are passed in to the decorated function in the same order they applied (the normal Python order that decorators are applied). This means from the bottom up, so in the example above the mock for `test_module.ClassName2` is passed in first.. There is also `patch.dict()` for setting values in a dictionary just during a scope and restoring the dictionary to its ...

Default values are eagerly evaluated. Above `:non_random_number` will evaluate to the same number for each call to the endpoint of this params block. To have the default evaluate lazily with each request use a lambda, like `:random_number` above.. Note that default values will be passed through to any validation options specified.
